Photos: How do I add a photo slideshow?

1. In Edit Website Mode, select Add New Page Block on the page in which you would like your slideshow to appear
2. Title your photo block
3. Select Photo/Slideshow and Submit
4. Browse to the appropriate folder on your computer, select the photo you wish to add and Upload
Or-Choose from your picture library
5. Add Picture
6. Repeat these steps until all of your photos have been added
**Very large photos can take a very long time to load, so we recommend resizing your photos to no larger than 800 x 600 pixels before you upload them to the slideshow. Digital cameras take large photos and must be resized prior to loading. Please refer to your digital camera download settings or for help with resizing images, please see our "How do I Resize Images" FAQ. (link to that FAQ)
8. Your current photos will appear as thumbnails in the Photo Editor. Select the type of image gallery you would like to have (i.e. Slideshow, Gallery 2 across, Gallery 4 Across)
9. Select Lightbox feature if you would like a large & sophisticated way to view your gallery on your live site. This is perfect for artists and photos with lots of detail
10. Save and Publish
