Design and Custom Graphics: I would like a custom background for my website. How do I do that?

We can easily embed a photograph or wallpaper into your website design. We recommend that you choose a photograph that is 1000 pixels wide at a minimum.

A great place to find professional photos or wall papers is iStockPhoto.com.

Please submit a support ticket via your Dashboard to our Design Team and we will contact you via email to gather the background files and implement your new background.

We charge a fee to implement your custom background plus the cost of the photo if we purchase it for you.
