

Domains: How do I update the server records for my domain with GoDaddy?

Please Note: This process is intended for customers who want to have their website hosted with us, but also maintain hosting and/or e-mail with GoDaddy.

You will want to create/edit "A Records" and "CNAME Records" for your domain

Instructions for how to edit/create the records can be found [here](#)

Things you will need to know:

For A Records:

"Host Name" is your domain, e.g. "mywebsite.com", **there is NO prefix**, e.g. **NOT** "www.mywebsite.com", **NOT** "http://mywebsite.com"

"Points to IP Address" is going to be "204.232.152.63"

"TTL" is going to be 14400

For CNAME Records:

You will want to create a CNAME record for "www." + yourdomain:

"Alias Name" is "www." + yourdomain, e.g. "www.mywebsite.com"

"Points to Host Name" is just yourdomain, e.g. "mywebsite.com" (again, NO prefix)

"TTL" is going to be 14400
