Paypal: I want to add a PayPal button to my site. How do I do that?

In order to accept PayPal from your website you must first set up an account with Paypal. Create your Buy Now buttons according to the Paypal instructions. Once your buttons are created, Paypal will generate HTML code for your new button. Once you reach that step follow these instructions:

1) Copy the HTML code generated by Paypal
2) Select "Add a New Page Block" on the page in which you would like to add your PayPal
3) Select HTML Block (Widgets, Code, etc.)
4) Paste the Paypal code into the HTML block
5) Select Done
6) Publish your page. Your PayPal button will now appear on your live site
