Domains: What is a Subdomain?

A subdomain is a unique domain name given to other areas of your main website. For example, www.yoursite.com is your main domain name, where as Shop.YourSite.com is a subdomain of your site specifically creating a short cut to the shopping area of your website. You can create as many subdomains as you like depending upon the scale of your website.

If you need one created please submit a support ticket from your Web Builder Dashboard.
